

PRESS RELEASE

SURTRONIC S-100 SERIES SURFACE ROUGHNESS TESTERS: SMARTPHONE TECHNOLOGY, WORKSHOP DURABILITY

Spectrum Metrology will be showing the latest addition to the Surtronic roughness tester range at the Make Measurement Matter show this month (DW Stadium, Wigan on 16th October - <http://www.makemeasurementmatter.co.uk/>).

The new Surtronic S-100 surface roughness checkers have been designed to be robust enough for the shop floor and flexible enough for any inspection room. Featuring USB connectivity and a robust touchscreen interface, components can be measured, analysed and saved in seconds.

The Surtronic is built to last, with impact resistant rubberized mouldings surrounding a recessed, high durability touch screen and a heavy duty long-life battery which can provide up to 2000 measurements from a single charge.

The Surtronic S-100 maintains all the features of the Taylor Hobson Surtronic range; it's 50mm stylus lift with right angle attachment and 70mm stylus reach means that even the most challenging surfaces can be measured without the need for expensive fixtures. A wide range of roughness parameters and free Talyprofile software complete the versatility of this roughness checker.

Spectrum Metrology is the authorised UK distributor for the Taylor Hobson Surtronic range. For further details visit <http://www.spectrum-metrology.co.uk/surface-roughness/>
