

## Case Study 7

APQP: Not Required

Part Spec: PP

Mould Flow: Required

Tool: 4 imp hardened to 48-52 Rockwell C

3D Model: Not Required

### Summary:

Not a particularly tricky tool but we included this in our studies because we completed this 4 imp construction part in 5 weeks including a tool drawing and product design. It was required to finish off a housing project.

The customer arrived to view sampling, they approved the part there and then, and then we ran the order off without a hitch.
