# Webinar| The designers guide to Autodesk Vault:

How to make data work for you – 13 November 2019

Data Management is something designers don't want to think about. Even whispers of the word 'data management' in a design office are enough to signal darting eyes, 'eers 'and 'ummms' and the occasional dash for cover. Why should designers worry about data management anyway? Isn't that a job for IT?

In this Webinar Cadspec will guide you through the multitude of ways Autodesk Vault can enable your organisation to manage your design data effectively. Covering subjects such as, BOM, Copy Design, Security, Lifecycles, Revision Management and much more.

This Webinar will provide an open platform for Q¢A at the end.
