ESCHMANN TEXTURES

Partner for creative surfaces.

For more than 15 years, surface specialist Eschmann Textures has offered its customers creative solutions for all possible requirements of surface texturing. Consultancy experience and constantly developed knowledge allows the group to meet the highest demands, and supply a competitive quality throughout the world. Starting with a multitude of creative options based on natural or artificial patterns, Eschmann Textures develops the ideal

surface structure for each respective application. Furthermore, modern prototype modelling methods lead to an exact and fast evaluation and selection of the ideal surface structure for each respective application. The on-site service during and after production, which can be realised anywhere in the world, complements the effective project management of Eschmann Textures from the initial idea to the end product.

ments of automotive interior design converge.

Modern development and production processes in the automotive industry require a project management system that sets the pace. These requirements are successfully fulfilled in vehicle

development and vehicle production with the elaboration and realisation of complex interior concepts. In doing so, Eschmann Textures acts as a link between OEM, First Tier Suppliers and subcontractors. The joint aim is the implementation of a harmonious and unique interior design.

Grip on textures

arket opportunities.

Coffee pot or watering can, beaker or sun-bed – in the segment of consumer products, surface structures with a good grip increase the sense of quality and also the marketing opportunities of products in everyday life. Functionality and aesthetic design are thus com-

bined. Eschmann Textures now has technological possibilities that enable flexible, time-saving and cost-effective production. This way, modern processes allow different types of textures to be applied onto the same tool. This enables the realisation of the most var-

ied design ideas that were formerly not able to be implemented using conventional production methods. Eschmann Textures is therefore able to enhance an almost unlimited range of products with individual surface structures.

No Mistakes

Quick selection and evaluation of textures

ESCHMANN TEXTURES

es.

By means of innovative procedures, Eschmann Textures ensures that the surface textures do not lose their individual identity due to tool conception, material selection and other influencing parameters. Long before the beginning of production, the impression and effect of newly developed surface structures can be simulated in grain

quality using Flotek by means of the application of prototypes made of all kinds of materials. This way, Eschmann Textures enables a fast and cost-saving evaluation and selection. Furthermore, the available production range includes a 5-axis laser along with 3D rendering & CAD systems. Laser technology enables complicated three-dimensional

textures on tool surfaces, previously not possible using conventional etching methods.

Apart from optimal prerequisites for decision making and various production procedures, Eschmann Textures also offers a world-wide technical after sales service, saving precious downtime during production. Grain repairs or grain reworking can usually be directly carried out on site – an unbeatable advantage in Just-in-Time production processes.

ESCHMANN TEXTURES

Globalisation not only means competition, but also international partnership. Eschmann Textures manages to create this connection to generate the best possible benefits for its customers in the field of surface design. Thus

Eschmann Textures is able to offer and realise services with European standards at a global level. Eschmann Textures also got together more than ten years ago with other companies from all over the world, each one a leader in its own domestic market, in a cooperative partnership to form

Texture Technologies International (T.T.I. for short). This enables partner companies internationally to have unique potential in providing unforeseen advantages in the field of design and know-how development.
