

Say hello to Malgorzata Jarzembinska -our latest recruit to Ad-Vance Engineering. "Gosia" is studying Technology with Design (Hons) at Ulster University and will be us for the next 12 months as part of her 1-year placement.

She will train as a process engineer working with our design office on CNC programming - using post- processors to generate various CNC languages for our 3 and 5-axis high speed machining centres.

She will also gain experience in working with the latest hyperMILL® CAD-S Solid software that can integrate 3D and 5-axis milling and turning strategies in a simple user interface. Gosia`s placement asserts once again Ad-Vance Engineering`s focus on nurturing the next generation of engineers through our links with our local Universities.

It also cements our policy of promoting greater gender balance in engineering through encouraging more female students to consider engineering as a career choice.
