Driving Efficiency Through Automated Precision from Optimax

In today's fast-paced manufacturing environment, automation isn't just a trend, it's a necessity.

Starrett Metrology is leading the charge by integrating advanced automation into precision measurement systems, helping manufacturers reduce inspection time, minimise human error, and boost throughput.

Solutions like the Starrett AVR CNC Vision Systems and the Starrett HDV Digital Video Comparators bring automated pattern recognition, programmable routines, and real-time data capture to the shop floor.

This means:

- Faster, repeatable measurements
- Seamless integration with production workflows
- Improved quality assurance without slowing down operations

By combining automation with accuracy, Starrett empowers manufacturers to scale production while maintaining uncompromising quality standards.

It's not just about measuring parts; it's about transforming your entire inspection process into a competitive advantage.

Starrett metrology systems are available exclusively in UK and EU from Optimax Imaging and Inspection www.optimaxonline.com
