

CSS GROUP

A WORLD CLASS SERVICE

The **CSS Group** is a privately-owned group of 3 engineering companies who provide a complete solution for customers involved in the manufacturing sector. We provide concept design, tooling, material selection, manufacturing and inspection. Effectively an end to end manufacturing solution for our customers, or any part of.

INVESTMENT CASTING SYSTEMS LTD

Investment Casting Systems provides engineering solutions to many high technology industry sectors including Aerospace, Defence and investment casting foundries.

We specialise in product development as well as tooling design and manufacture, we manufacture our own range of polymer products for the investment casting industries and our toolmaking capacity is one of the largest in the industry with the capacity to machine up to 3.2M X 2.1M X 1.0M while maintaining the tightest of tolerances expected in these high-end sectors. AS9100RevD; GTMA world Class toolmaker; SC21 Bronze.

VERSATOTE

Due to the ongoing success of CSS moulded products, the Versatote brand was created to encompass our tote bins and containers used in the warehousing and logistics sectors.

All Versatote products are designed and manufactured in-house, to either a customer specification or for our catalogue of products. Versatote products also include accessories such as racking dividers, bespoke trays and lids and high-quality printing and labelling. All Versatote products are designed, engineered and manufactured in the UK and delivered to customers around the globe.

Technical Composite Systems offers a complete manufacturing solution for high quality composite components across a diverse range of high tech industries. We specialise in supplying the international aerospace and defence sectors by combining engineering experience and material expertise with a customer focused culture.

We support the following activities; fundamental design activities, material selection, manufacturing process specification, tooling design and manufacture, prototype manufacture, test simulation, material analysis, manufacture (low volume through to serial volume), assembly, bonding, coating, finishing, first article inspection report (FAIR).

Our manufacturing facility based in south west UK offers a range of manufacturing technologies to suit the technical and commercial objectives. AS9100 RevD
