

DAYTON PROGRESS THREAD-FORMING

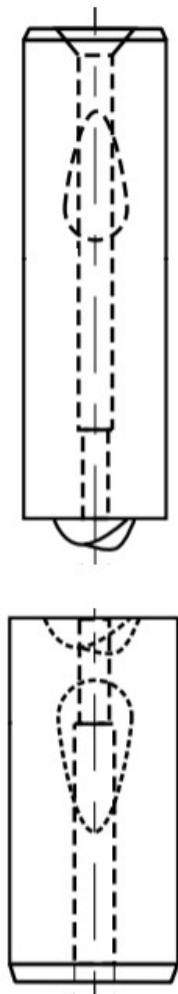

Single step punch and die units
for thread-forming

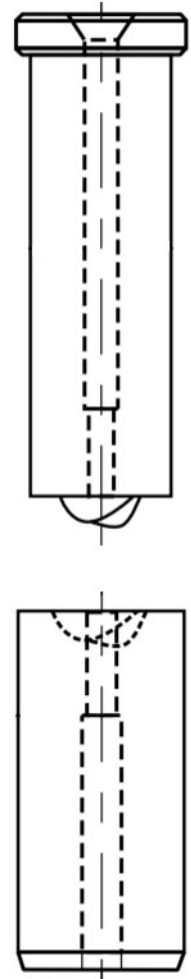

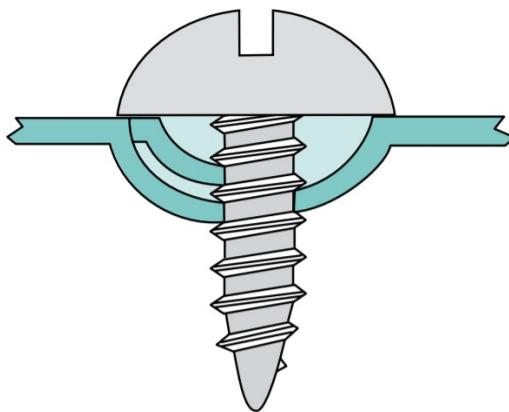

a MISUMI Group Company

Press die components
by DAYTON PROGRESS

Dayton Thread Form Punch & Die Button Units offer you a single-step method for punching and forming threads. Dayton Thread Form works by punching the hole, lancing the material, and cutting a helical spiral in the material to form the proper thread helix for the desired type of metal screw. Thread Form creates a complete self-locking fastening system that holds the screws more tightly with metal tension—thereby reducing vibration, cutting assembly costs, and increasing productivity.

Call or Email us or contact your Dayton Progress regional Sales Engineer for further information.
