

EASY-TO-USE INTERACTIVE TNC CONTROL SYSTEM

TRAINING LAUNCHED BY HEIDENHAIN (GB)

A new interactive and easy-to-use low cost training programme for TNC control system operators of every skill level has been announced by HEIDENHAIN (GB), the world-leading supplier of angular, linear and rotary encoders, digital readouts and CNC systems.

The HEIDENHAIN Interactive Training (HIT) system has been developed to allow users to build their understanding of three- and five-axis TNC system programming by improving both operational skills and knowledge using a modular step-by-step format. HIT offers practical and accessible training in:

- [] Conversational programming
- [] DIN ISO programming, and
- [] Five-axis machine programming (3 + 2 package) for more experienced three-axis operators.

The programme provides clear explanations of TNC programming principles, on-screen animations of TNC functionality, a detailed training workbook and example exercises.

HIT works in conjunction with programming station software so that users can try out exercises while they watch the on-screen demonstrations. After each level, users can take an interactive test to measure their knowledge and understanding.

Visit www.heidenhaingb.com/interactive_training.php for more details.
