

High Performance Power Tools for Polishing

Available from Engis UK Ltd – the European Division of Engis Corporation

Precise Results for the Discerning Toolmaker

Minimo® performance power tools provide the optimal solution for the toolmaker, mould and die finishing specialist or component manufacturer who is looking for consistent, accurate results.

Minimo's ultrasonic and standard power tooling systems not only provide unsurpassed accuracy, reliability, power and versatility – they are also comfortable, easy-to-use and minimise fatigue.

Technical benefits include a quick-change "tool-less" collet mechanism that provides minimal run-out and maximum tool clamping force, as well as an innovative ON/OFF switch built into the handpiece. A variety of rotary head, motor, handpiece and power pack combinations enable significant application flexibility.

In addition, when the Minimo One system is used in conjunction with Hyprez diamond compounds, lubricants and the full range of Engis toolroom products, precise results are ensured time and time again.
