

PRESS RELEASE

For immediate release

May 2013

IndySoft announces the release of version 9.0 of their suite of Calibration, Asset and Tool Management Software products.

When it comes to adding industry leading features to their software, IndySoft are certainly up there with the biggest and best of them. The eagerly awaited version 9.0 of their top three main products IndySoft Calibration and Asset Management software, their IndySoft Commercial Lab Calibration software and their IndySoft Tool Management software are all available now for immediate download.

Existing users of IndySoft that have a paid-up support agreement can get this NEW Version for FREE right now. Other users will need to talk to their IndySoft contacts for details on how to get this must-have up-grade.

IndySoft believes that the purchase of a Calibration or Tooling Asset Management System is one of the most important decisions a business can make in relation to their quality program needs. They understand that these are your operations and the right software package is going to be the one that can complement and augment your process, not unflinchingly dictate how you have to run your business. At IndySoft they take the time to understand your business needs and challenges then pull from their extensive experience to offer just the right mix of products and services to meet your long-term goals.

The IndySoft Calibration Management package offers labs a rich feature set to manage your specific quality needs. With support for leading enterprise platforms IndySoft Calibration Management is perfect for deployment in the corner lab of a start-up manufacturing facility or an international quality-driven operation as well as commercial calibration labs that receive all types of equipment from their customers. With the exclusive process modelling engine, companies can configure their own event-driven system with checkpoints; rule sets and documentation at every point along the equipment path, ensuring assets are handled according to existing quality procedures. Businesses can calibrate any type of equipment with IndySoft, generate certificates, calibration stickers with barcodes as well as automate calibration due reminders and distribute these and other user defined reports automatically at a time via email.

Jake Bishop, Managing Director of IndySoft Europe says that "Version 9 isn't the only innovation coming out of IndySoft. At the start of 2013 IndySoft officially switched to a quarterly release cycle. This means that once a quarter the core product will be released with new features and any pending maintenance issues. There will no longer be "major

new versions" at annual intervals... we will be pushing the products forward continually each quarter with some very big announcements as things progress."

IndySoft have a knack of incorporating the right features into their software just when industry has started to think they will need them. This is why IndySoft are and will always remain leaders in Calibration, Tooling and Asset Management Software.
