Midas Mouldings Supporting Science

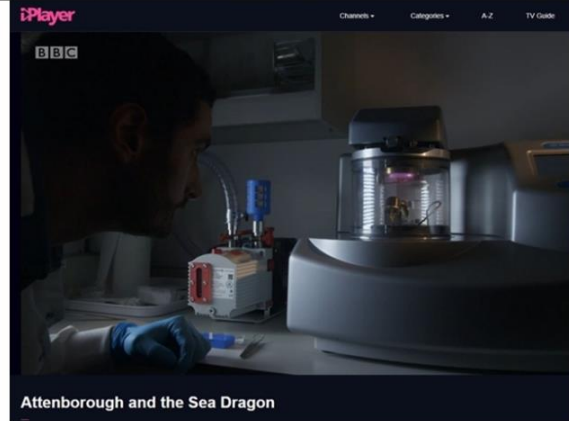

As Midas we feel very privileged to work with some of the UK's most innovative companies producing custom **polyurethane enclosures** for their novel products and new breakthrough technology, typically in the **Scientific** and **Medical** fields. However, it becomes just that little bit more special when you can see how these amazing devices are used in real life applications. This was the case for not just one, but two of our customers' **instruments** on the latest episode of the nation's favourite, Blue Planet.

We feel proud to play a small part in enabling first class devices such as these get to market with our super fast, low volume **RIM moulding** process so they can do the amazing science that they do.
