INFINITE POSSIBILITIES.®

QUICKGRIND®
carbide tooling

INFINITE POSSIBILITIES.®

What if you could have the optimum tool, with the marginal cost increase more than covered by improved production throughput and efficiency? With Quickgrind, you can. Welcome to a world of Infinite Possibilities.®

At Quickgrind we do not limit ourselves to standard ranges, and we do not limit you to tools we happen to have in stock and want to sell you. Instead, our mission is to provide you with solution-based tooling, to give you the right tool, for the right job, at the right price.

All our ballnose cutters can be designed specifically for your application – size, diameter, neck relief, coating, reach and number of flutes can all be tailored to your needs. Through-coolant and other options are also available.

End the compromise of standard tooling. Contact our team today to discuss your applications, aims and requirements – there are no limits, only Infinite Possibilities.®

Call +44 (0) 1684 294090
or visit quickgrind.com

Ordering is as easy as **one, two, three**

1. Choose your shank spec

- Length • Diameter
- Tolerance • Type HA/HB/HC
- Through-coolant
- Coolant grooves... and more

2. Choose your neck spec

- Length • Relieved
- Diameter • Coolant grooves
- Tapered... and more

3. Choose your head spec

- Diameter • Tolerance
- Length • Number of flutes
- Helix angle/s • Anti-vibration
- Radial/axial through-coolant
- Coating... and more

That's it. No catalogues to trawl through, no complicated product codes, no lengthy tables... just tell us what you need for your job and we will make it for you. Even specials can be designed, proved and delivered in days, at a cost you could recoup on your first job. That's Infinite Possibilities.®

Remember, just ask
we will make it for you

Top flight ballnose cutters

Our ballnose cutters, also known as spherical end mills, are available in three main types – the 2 flute Gladiator, 4 flute Zodiac, and 2 or 3 flute Alligator ballnose. They are ideal for milling contoured surfaces, shallow slotting, finishing and pocketing in a wide range of materials and applications, especially in mould and die.

Applications

- Roughing and finishing
- Complex surfaces and features
- 3D and contour milling
- Suitable for use in steels, stainless steels, ni-alloys, titanium, PH materials, tools steels, cast iron and aluminium and give high resistance to wear
- Developed to reduce machining forces and to give increased tool life
- Geometry ensures high stability during machining with enhanced chip flow

Benefits

- Higher speeds and feeds possible with increased productivity and high metal removal rates
- Coatings aid chip flow

Stainless M		Steels P	
Precipitation 13-8/15-5 17-4PH	Austenitic 303/304/316L	Low alloy 1000/1100/1300	Medium alloy 200/252/300

Aluminium 6061/6082	Die-cast aluminium 10% Si	Hardened steels 45-55 Hrc	

High Performance Ballnose End Mills

A real warrior

This world beating 2 flute ballnose cutter is used to great effect in mould and die, general engineering and on components such as turbine blades.

Whether used with a 90° or 10-15° tilt approach Gladiator is a stable and accurate tool allowing for high speed cutting and machining. It is suitable for roughing, semi-finishing, finishing and super-finishing with profile, copy or contour milling. We encourage our clients to tell us what their issues, aims and future expectations are and through our Infinite Possibilities® programme we develop the optimised tools and cutting strategies for their production.

High Performance Ballnose End Mills

A stellar performer

The Zodiac is based on our exceptional Mirage end mill and brings a new dimension to ballnose end milling.

Four flutes provide for highly efficient swarf evacuation and enable high speed and feed machining with great stability. Whether contour milling or profiling this tool excels at roughing, semi-finishing, finishing and super-finishing in a wide range of materials. As part of the Infinite Possibilities® programme we can design the optimum tool for your applications. This can be stub length, long reach with short flutes, neck relieved and with any flute number that will give you the best performance with repeatable quality, ensuring high productivity and reduced cycle times.

Our Gladiator and Zodiac ranges are available to you now, with custom-made tools on a short delivery.

Call +44 (0) 1684 294090 or visit quickgrind.com

Applications

- Contour milling
- Profiling
- Roughing
- Semi-finishing
- Finishing
- Super-finishing

Benefits

- Higher feeds & speeds
- Great stability
- Highly efficient swarf evacuation
- Supreme wear-resistant coatings

High Performance Ballnose End Mills

A ballnose with bite

The Alligator Ballnose is part of our successful Alligator end mill range and provides exceptional performance in most non-ferrous materials including aluminium and aluminium alloys.

Copy milling, contour milling and profile milling are all strategies these tools cope well with, providing a high degree of swarf removal and tool wear resistance. They are available in uncoated for most applications or with our TX coating for the more testing materials.

If you are worried this will incur high costs and long deliveries, our Infinite Possibilities® programme is here to provide you with exactly the tool you need at little more than a standard tool price and on a short delivery time.

Your production will benefit greatly by talking to us – we are here to help.

The Alligator ballnose is available with 2 or 3 flutes and any overall, flute or neck length you require.

Call +44 (0) 1684 294090 or visit quickgrind.com

Applications

- Copy milling
- Contour milling
- Profile milling

Benefits

- Higher wear resistance
- Increased swarf removal rates

TAPER

Ballnose

High Performance Ballnose End Mills

Deep pockets

short flutes

In mould and die components, pockets with deep side walls can cause headaches. Our tapered reach ballnose gives hard working engineers and programmers much needed relief.

Machining angled side walls is a common issue which is why we developed this tool, with short flute lengths and tapered necks to give adequate clearance when profile machining cavities.

Other industries also benefit from this type of tool due to the ever increasing demand for complex parts requiring angled walls, which are pushing the boundaries of feasibility for straight reach tools. A tapered reach tool brings many advantages due to the increased cross-section strength.

A tapered tool of 3-5° will give 60-70% less deflection than a straight tool, resulting in less chatter, a far better surface finish and greatly improved tool life.

Transforming machining strategies

Eliminator is an exciting range of barrel tools that takes the arc segment of a circle to form the radius of the flute, enabling improved step down strategies when compared to ballnose endmills and reducing cycle times by up to 90%.

Please ask for our Eliminator brochure or call +44 (0) 1684 294090 for more information.

Applications

- Replaces scanning with ballnose and corner radius endmills
- Highly efficient finishing and semi-finishing
- Profiling, flanks and steep walls
- Pocket milling, especially deep, hard to access surfaces
- Mill faces and blends with one tool
- Hard to reach areas without using expensive long reach tools
- Machining steep or flat planes
- Faces with minimal curvature

Benefits

- Up to 90% cycle time reduction achievable
- Increased ap (step down) – greatly reduced machining time
- Smaller cusp (scallop) height
- Tool path distance greatly reduced – better for your machine
- Two-in-one tool – side cutting and ballnose cutting
- High Ra finish
- Reduced effects of thermal deformation (heat transfer)
- Long tool life
- Suitable for sharpening and recoating multiple times with our QuickEdge programme

The latest **machining strategies**

Do you have a component that is taking too long to manufacture? Are you struggling to find the time and resources to investigate advanced machining and cutting tool strategies that could easily double your output? If so, you need QuickCam.

QuickCam is Quickgrind's advanced service designed specifically to support you with the machining of complex parts in difficult materials, like the bevel gear shown here.

Using Open Mind Hypermill MAXX machining as our in-house CAM software we provide accurate cycle time studies to show instant time savings on your parts. We also work with a number of CAM partners such as SolidCam, NCG Cam and Tebis as well as the verification software from CGVericut.

You may only require an optimised toolpath for a certain area of a part. We can provide an NC program which can be inserted into your existing program, enhancing the performance of your machining process and ultimately allowing more parts to pass through your machine shop.

And if you already have an optimised strategy for your machine, we can of course re-tool your component with our extensive range of high-performance solid carbide tooling.

Benefits

- Reduced cycle times
- Reduced tooling costs
- Increased output
- Better due date performance
- Improved capacity
- More throughput
- More happy customers
- More profit

Adding value to your tooling investment

All our ballnose cutters are suitable for remanufacture. Our unique QuickEdge process can give you up to seven times extra usage out of your tooling, and with material costs continuing to increase you can't afford to ignore the benefits of remanufacture.

- Tools controlled by size, number of reissues and remanufactures
- Reduced logistics costs
- Extremely attractive price and performance over the life of the tool

Remanufacture doesn't mean compromising on quality. It has always been our policy to produce tools of such high quality that they can be used more than once. Which means that even after seven remanufactures you will continue to enjoy new tool performance.

but to produce it consistently is precise*

24/7 control

of your tooling inventory

Is your tooling inventory reduced to a minimum? Is it secure?
Are your re-stocking orders generated automatically and on time?
Do you want to reduce your tool purchase administration costs?

Quickgrind's robust, proven tool vending solutions are the answer to all these issues and more. Once we have audited your tooling requirements and consumption levels, we will supply you with a fully stocked machine (our machines can hold from 300 to 1,680+ individual tools). Usage and stock levels are then automatically monitored and replacement tools sent before your stock runs out.

And because your tooling inventory and usage levels are pre-determined, you regain complete control of your purchase administration time, and costs – to as little as one purchase order and one invoice per month.

Save time, save money... take control of your tooling with a vending solution from Quickgrind.

Benefits

- 24/7 secure access
- Allows minimum stock holding
- Automatic re-ordering
- User-friendly operation
- Tailor access to specific users
- Easy access to stock information and statistics
- Audit your tooling stock at the push of a button
- Suitable for new and remanufactured tools
- Stocks a wide range of tools types and sizes, and for high or low stock turnover
- Reduces purchase administration costs

Improving your machining performance

Quickgrind's state-of-the-art Technical Centre offers a comfortable and technologically advanced environment to discuss all of your cutting tool requirements, challenges and ambitions.

Our experts will work with you to conduct trials whilst generating and running tool paths and machining strategies. Our investment in the centre enables us to demonstrate what is possible with our ground-breaking tooling and tool management solutions.

The centre is fully equipped with a seminar theatre and training room, meeting rooms and machining centres. Visitors can take a guided tour of our production facility, undergo technical training and discuss their specific requirements.
