

SHOWTIME FOR ROEMHELD AT SOUTHERN MANUFACTURING

Roemheld will be exhibiting the latest technological innovations in 5-Axis vices, zero point mounting and materials handling systems on stand No. R74.

On display, will be a pallet vice system that offers the top quality and performance Roemheld is renowned for at an entry-level price. The PC 80 clamping system combines a simple, compact design with high precision and process safety. It is particularly suited for the manufacture of small and medium sized batches and can be used in pallet magazines within automated systems.

Visitors to the stand will also be able to see Roemheld's air-operated easy click zero point system. At a height of just 19mm and a diameter of 85mm, the Stark Easy Click module system from Roemheld has been designed to meet the demands of designers and production engineers looking to utilise every millimetre on machine tables and assembly areas, as well as creating new opportunities to use a quick change system within automatic applications.

Also on the Roemheld stand will be the Modulog assembly and handling system which brings safe, ergonomic and secure hand assembly to automotive workstations and green button cells. The Roemheld Modulog system consists of a variety of combinable components for lifting, rotating, tilting and fixing of mechanical components. The range includes lifting columns and press-in devices. The adaptability of the Modulog system is suitable for a variety of applications including use in highly flexible, semi-automation of manual workstations.

To find out more, visit Roemheld on stand R74. More information on Roemheld's range of workholding and materials handling is also available at www.roemheld.co.uk or telephone 01462 459052.
