Seco Tools Expands Range of Jetstream Tooling® Holders for General ISO Turning

WARWICKSHIRE, 24 April 2020 – Seco Tools has announced the expansion of its Jetstream Tooling® Integrated (JETI) technology with a complete range of holders for General ISO turning. This easy-to-use internal coolant technology increases tool life dramatically while also shortening setup and indexing times thanks to a new single-screw insert clamp design and the absence of external hoses.

JETI ISO Complete Range.jpg

By placing high-pressure coolant directly in the cutting zone, JETI technology ensures superior chip and temperature control. For further process optimisation, holders equipped with Jetstream Tooling® Duo feature a second coolant outlet from the clearance side that can be turned on or off depending on part-processing requirements. As a result, manufacturers can run much higher cutting data without impacting application security for any ISO-S, ISO-M or ISO-P turning application.

First introduced for MDT, X4, 150.10 and Snap-Tap® holders, the expanded range of JETI for General ISO holders includes 182 new products for all inch, metric and Seco-Capto™ holders.

For more information on the full range of JETI ISO toolholders, please contact a local Seco representative or visit our JETI holder product page: <https://www.secotools.com/article/110172>

Headquartered in Fagersta, Sweden and present in more than 75 countries, Seco Tools is a leading global provider of metal cutting solutions for milling, turning, holemaking and toolholding. For more than 80 years, the company has provided the technologies, processes and support that manufacturers depend on for maximum productivity and profitability.
