

## Solution for Heavy or Light jobs

In order to bring big n' heavy workpieces precisely, and automatically, on to a machine tool it makes some considerable demands on a handling device. But when the same robot must be used in mixed mode, for light n' small parts too, then this is a real challenge.

The Erowa Robot Dynamic makes the job simple thanks to its fully automatic gripper change system.

So now all EROWA system sizes can be exchanged from the individual magazines. Grab the exchangeable fork gripper and it ensures a secure lift up to 500 kg. and with the RCS5-gripper, the Robot Dynamic 500 can now load all other Erowa pallet sizes too.

The transfer unit of the Robot Dynamic 500 can be used standalone or be equipped with an additional linear rail that allows up to 8 machines to be loaded.

Despite the massive capability of the Robot Dynamic 500 it still remains very compact compared to other automation systems.
