

Metrology and Inspection devices transforming the Status Quo

After the success of last year's Southern Manufacturing and Electronics show, Optimax (www.optimaxonline.com) are delighted to be returning with our latest, Optical Inspection and Metrology equipment on February 11-13th 2020.

One of the UK's foremost independent optical inspection, non-contact metrology and force measurement specialists, Optimax, invites you to join us at stand D190 to showcase the launch of the 2mm diameter HD Video Borescope, to enjoy a demonstration of the EVOCAM II and to discover the fully automated measurement of the Starrett AVR300.

The 2mm diameter HD Video Borescope enables you to see even further and is incredibly robust at a low diameter. This smaller diameter makes internal channels, bores and cross-drilled holes newly accessible.

Vision Engineering's EVO CAM II Digital Microscope is an ergonomic, accurate and robust solution for high-precision inspection. Its excellent image quality and optical magnification makes it a powerful imaging solution to meet increasing demands for shop floor visual inspection.

The Starrett AVR300 has a multi-sensor approach with video, touch probe and laser sensors to perform fully automated and integrated measurement. This video measuring system is ideal for repetitive measurements and automatic comparison of data to CAD files.

Don't miss the opportunity to get a free demonstration if you bring along any parts and samples and learn about the leading-edge metrology equipment driving British manufacturing.

We look forward to seeing you there - get your free ticket today: <https://www.industrysouth.co.uk/>
