

WDS extend levelling feet portfolio with stainless steel options

WDS Component Parts Ltd. is now offering machine levelling feet in three stainless steel specifications, 303, 304 and 316, alongside a wide range of other materials such as nickel- and zinc-plated steel.

The new feet extend WDS's current range so that virtually all application requirements can be met.

The 303 stainless steel levelling feet are for use in environments that can be classified as mildly corrosive. Aimed at corrosive, but not extreme working environments, the 304 feet are robust and their wide ranging appeal is enhanced because they are also aesthetically pleasing. They are often chosen as an alternative to standard zinc plated feet. For extreme application environments where aggressive chemicals or bad weather are often experienced the quality of 316 stainless steel levelling feet excels to provide a long life reliable solution.

Options with the new feet include stainless steel bases, plastic bases, bases with plastic covers, EHEDG (European Hygienic Engineering and Design Group) certified hygienic feet, non-slip feet and bolt down feet.

Designed for use with a wide range of machinery such as conveyors, mixers, printers and packaging stations, the feet resist corrosion even under aggregated conditions such as during high pressure or chemical wash-down.

These new adjustable feet complement and extend WDS's existing range of adjustable machine levelling feet. Together they meet all the needs of general manufacturing and food processing machinery and equipment that needs to be levelled on uneven surfaces. They are available with base diameters of 40mm, 60mm, and 80mm, with nut sizes from M8 to M20 and lengths of 50mm, 100mm, 150mm, and 200mm. They can safely support loads up to 400kg.

For hygienic applications, WDS offers feet with white bases. Other colours available include black and blue. A range of vibration absorbing machine feet is also available from WDS.

The company website (www.wdsltd.co.uk) gives full technical details, including downloadable 2D and 3D.

WDS is a leading European manufacturer and a global supplier of standard parts, machine accessories and workholding components. It has a wide ranging portfolio of high quality products. The company's objective is to provide unrivalled choice and excellent value for money. By running its manufacturing and distribution functions as an integrated operation, stock management and lead times are optimised so that customers can expect prompt delivery and accurate order fulfillment. To ensure that this standard is maintained a team of knowledgeable people is available to assist with everything from product selection and specification, order and dispatch. After sales and bespoke manufacture services are also available.
