## NEWSLETTER - AUTUMN 2016

### Welcome to our first Newsletter.....

Whiteland Engineering Ltd., has a highly adaptable multi-skilled workforce who are dedicated to providing a "Premium" engineering experience to existing and potential customers. Over the years we have worked and continue to work in a variety of industry sectors including, M.O.D., Print and Packaging, Motor Sport, Power, Aerospace and Specialised manufacturing. We are proud of our achievements and are dedicated to continuing in our path of excellence.

Neil.D.Whiteland  
Managing Director

WE SUPPLY: PRECISION SUB-CONTRACT  
MECHANICAL ENGINEERING, MACHINING  
SERVICES, INCLUDING CNC MACHINING,  
TOOLMAKING AND SPECIALISED MECHANICAL  
ASSEMBLIES, ALL TO CUSTOMER SPECIFICATIONS.

#### New Plant Addition - Mazak QUICK TURN NEXUS 350MY II (Driven Tools)

This new machine not only brings advanced technology, productivity, value and performance but enables us to machine larger diameter parts in a single setup. We are able to produce components up to 1.5m in length and from one off prototypes, small batches through to medium volume production.

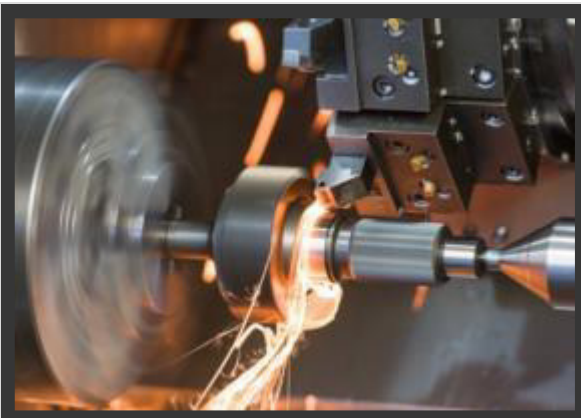

[See it in action here!](#)

### **New Service - We now have a Kemwelder IV Welding System**

The welder works by gently touching the spot of the welding point with the electrode tip. After 2 seconds, the control unit triggers welding, at the same time, an electromagnet draws the electrode back. You then precisely position the electrode for subsequent points which can then be triggered every second. For safety, the shutter of the microscope closes with each weld. This equipment is ideal for tool and damaged components repairs.

### **Our Mission - Aim to improve by investment in all areas of the business**

Sub-contract machining is a rapidly changing market, and we aim to keep up top date with the following advances in machining techniques, cutter technology and work holding. We are based in the South West, but will supply all areas of the UK. We are specialists in producing high quality machined components in a variety of materials using the latest C.N.C. technology.
