

Midas - Specialists in Medical and Scientific Mouldings

Midas Pattern Company specialises in low-volume, high quality polyurethane mouldings for medical and bio-medical laboratory applications, in sizes up to 2.5m x 1.5m, as well as creating large prototypes in production materials in very short timescales. Midas mouldings are particularly suitable for equipment enclosures in medical, analytical and scientific applications.

Midas offers two tooling systems:

FASTrim™: a low cost solution to producing even large prototypes, in production materials in as little as 10 – 15 days.

MRIM™: a high quality composite tooling system offering low set-up costs for high-quality mouldings in volumes from 1 to 2000 per annum, with a guaranteed life of 5000 off.

Both systems are produced in-house, are very accurate and can be easily modified to incorporate changes in design at any stage of tooling and moulding production. All Midas mouldings are supplied fully finished, painted, screen-printed and assembled ready for installation.
