

Product Champions

Renfrew Group International works in a diverse range of product sectors to produce award winning designs with ground-breaking engineering and expertise

Renfrew Group International has been on the scene for 30 years or more, constantly championing new concepts, and enthusiastically developing new ideas. The design team is a heady mixture of mature heavyweights and fresh thinkers whose close interaction results in award winning designs and ground-breaking engineering.

The consultancy's success has benefited from a design engineering facility packed with the tools and equipment needed to develop products of all types and sizes. This in-house complex of labs, workshops and production spaces, extending to over 4,000m², allows proof-of-concept experimentation to run alongside prototyping, tool trials or even small scale manufacturing.

But perhaps the most startling aspect of the consultancy's output is the diversity of product sectors with which it engages. From medical devices to scientific equipment - safety apparel to infection control goods - energy systems to motorcycles - consumer goods to ergonomic furniture - each project adding to the consultancy's accumulated knowledge and expertise

RGI has always been strong on innovation and the building of commercial value for its clients through robust intellectual property. Most if not all projects undertaken by the consultancy result in new patents covering the entire product or as protection for key functions. The new IP is sometimes additional to the invention brought to project with the brief. Renfrew Group International is constantly seeking fresh assignments and new challenges –its raison d'être is the creation of must have products that change the game or at least substantially move the goal posts.
