

## DaceCrown Expands Birmingham Manufacturing Hub with Haas Mini Mill Featuring 4th Axis

Birmingham, England — 23 September 2025

DaceCrown Ltd., a premium supplier to regulated industries and the drinks sector, proudly announces the installation of a new Haas Mini Mill with 4th axis capability at its Birmingham facility. This strategic investment reinforces DaceCrown's commitment to precision engineering, agile production, and scalable support for its UK manufacturing network.

The Haas Mini Mill's compact design and advanced 4th axis functionality enable multi-face machining in a single setup—streamlining operations, improving repeatability, and supporting tighter tolerances for complex components. This upgrade empowers DaceCrown to deliver faster prototyping, small-batch runs, and technical validation across bottling, medical, and industrial applications.

The new capability complements DaceCrown's recent expansion into premium gin bottling and its ongoing workshop upgrades, including enhanced machine guarding and crevice sealing protocols. Together, these initiatives strengthen the company's reputation for operational excellence and forward-thinking innovation.

### About DaceCrown Ltd.

Based in Birmingham, DaceCrown is an ISO-certified supplier serving regulated industries and premium bottling clients across the UK. Known for its meticulous documentation, strategic outreach, and award-winning growth, DaceCrown blends technical expertise with brand storytelling to deliver lasting value and trusted partnerships.
