

Right-angle attachments are used when working in confined spaces or for measuring lateral bores. The 90° diversion is effected with the aid of a high-precision transfer lever (2). When screwing in the BMD, it is important to ensure that the transfer lever is set in the lower position (see sketch).

The angular alignment of the plug gauge contacts (4) with the right-angle attachment (1) is not specified. If a specific angular position is preferred please specify when ordering. Other right-angle attachments with 45° and 60° are also available.
